Updated Test Case Document

Current task allocation: Team ownership. Primary owners are Anand (01-04, 19-20), Bidre (05-08, 17-18), Ayush (09-12, 21-22), Bhavesh (13-16, 23-24). Module support and historical authorship remain distinct.

Team 13 | 9 November 2026 | Final verification on main

The source-file hashes are recorded in source-manifest.json. Raw outputs identify the actual environments and execution times.

Baseline and execution rules

The following 80 cases retain the IDs and expected results of approved STP Section 9.

The final source manifest, full JUnit, live-system JSON and browser JSON identify executed

checks. The earlier detailed execution report preserves original test data and procedures.

A PASS below cites the applicable automated rerun or executed historical method. Platform

and participant requirements remain explicit partial/blocked outcomes.

Case ID	Requirement	Procedure / test data	Expected result	Final actual result	Status	Evidence
UT-AUTH-01	FR-001	Weak password rejected	Validation error, minimum 8 characters	Applicable service/unit regressions passed in final suite.	PASS	evidence/final/unit-junit.xml; evidence/final/junit.xml
UT-AUTH-02	FR-001	Strong password accepted	Accepted	Applicable service/unit regressions passed in final suite.	PASS	evidence/final/unit-junit.xml; evidence/final/junit.xml

Added regression scenarios

tests/test_final_workflows.py covers registration races, admin list/audit authorization, logout ownership, shared-input deletion and rollback. tests/test_tsmp21_security.py adds workspace membership revocation and read-only evaluator access. Browser scenarios add responsive layout, admin/evaluator controls, exports and invalid inputs. frontend/tests/session.test.mjs covers refresh concurrency, sign-out races and expiry. The full suite contains the passing cases recorded in final/junit.xml.

Final planned-case disposition is 78 PASS, 1 PARTIAL (PORT-01) and 1 BLOCKED (USA-01). The two remaining cases need actual platform/participant evidence.
